DPI FRAMEWORK AND PRIORITIES

The Presidential Commission on Open and Electronic Government has established a framework aimed at enhancing government efficiency and transparency, and promoting digital inclusion and transformation.

Expanding digital inclusion and digital public infrastructure is helping to democratize access to information and technology, enabling broader participation in the information society. Simplifying procedures and improving access to services are key factors in increasing the impact of government actions, potentially improving citizens' quality of life by making public services more accessible and minimizing or eliminating requirements through streamlined digital government processes.
